Characteristics

- Alarm indicators are connected to automatic fire detectors in order to indicate quickly the source of an alarm signal from detectors which are not easily accessible or visible.
- The alarm indicators contain an indicator lamp unit with two integrated LEDs. They light up as soon as the connected fire detector gives an alarm.
- Only **one** external alarm indicator may be connected to each detector.

Alarm indicators FDAI92-Ex

- Alarm indicator is mounted with two screws either directly or on a wall.

- For the following applications the FDAI92-Ex can be completed with AI330 adapter frame:
  - for surface laid conduit or ducts
  - to increase the loop space
 - as an adapter for different makes of box
